Perceptibility & Identifiability	Strongly disagree	Disagree	Somewhat disagree	Neutral	Somewhat agree	Agree	Strongly agree	Not applicable
1. I understand what the system's outputs mean.								
2. I know what to do when the system communicates something.								
3. The system's actions made sense to me.								
4. The system used words that made sense to me.								
5. I could clearly recognize the system's outputs independent of my perspective.								
6. I could clearly recognize the system's outputs independent of light conditions.								
7. I could clearly recognize the system's outputs independent of the external noise.								
8. I could clearly recognize the system's outputs independent of the external physical disturbance (e.g. vibration from a bumpy road).								
9. I could clearly read the visual information the system displayed.								
10. The system does not unnecessarily distract me from my main task.								
11. The system helps me to stay engaged in the task.								
12. The situation I was in distracted me so that I could not focus on the system's outputs.								
13. The system displays so many outputs that I started to ignore them.								
14. The duration of the feedbacks seem too long.								
15. The feedbacks are too loud to me.								
16. The feedbacks were annoying to me.								
17. It was easy for me to identify the system's visual feedbacks.								
18. The system displayed outputs in the places where I expected them to be.								
19. It was easy for me to identify the different components of the controls and displays.
